Mens' Health Matters!

Overview

300,000 American men develop prostate cancer each year. With modern therapies, most are cured. As is often the case with diseases that have a long natural history, different treatment philosophies and paradigms exist, all of which may confound the busy Primary Care Physician and patient in their decision making process.

Physicians of The Florida Radiation Oncology Group, in conjunction with Northeast Florida's leading Urologists and Medical Oncologists developed this conference to answer often-heard questions about the detection, diagnosis, staging, treatment, and follow-up of patients with localized and systemic prostatic carcinoma.

We have arranged for Primary Care Physicians to sit with their Urologists as well as their Radiation and Medical Oncologists to discuss presented information during the conference as there are numerous approaches to all aspects of prostatic cancer care.

An expert international faculty has been assembled to discuss treatments for both local and systemic disease. In addition, given the ever increasing importance of the internet as a source of patient information, we will explore the evolving world of "Grassroots" internet campaigns and consumer-based healthcare applications... a topic of interest to everyone.

AGENDA

Note: Speakers are indicated by number

- 8:00 Registration and Continental Breakfast.
- 9:00 Welcome to Knowledge... Welcome to Jacksonville!
